The nucleic acid sequence encoding the Streptococcus pneumoniae protein can be useful in vaccines for inducing protective antibodies against Streptococcus pneumoniae, for treatment or prevention of infection e.g. pneumonia, otitis media or meningitis. Probes based on the nucleic acid are used to detect Streptococcus infection (by usual hybridisation or

The protein can be used similarly to detect specific antibodies in standard immunoassays, especially for diagnosing or monitoring infections. Antibodies which bind the protein are used to detect corresponding antigens, to purify the protein and for passive immunisation (optionally coupled to a toxin). Vaccines are administered, e.g. by injection, orally or through the skin, typically at 0.01-1000 (especially 10-300) mu g/ml per dose.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Local

The S. pneumoniae antigens have antibacterial activity and can be used in vaccines. The S. pneumoniae antigens can also be used to prevent or attenuate a Streptococcal infection in an animal. The polymucleotides encoding the S. pneumoniae antigens can be used to detect Streptococcus nucleic acids. ABQ84905 to ABQ85130 represent primers used in the cloning of S. pneumoniae ORFs (open reading frames) which are used in an example from the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC Streptococcus pneumoniae type 4 strain genomic sequence appearing as CC ABS56454. Also included are an antibody which binds one of the CC proteins, treating a patient by administering first and second primers, CC antibody (in a composition), a kit comprising first and second primers. CC which are the nucleic acid cited above or fragments between nucleotides CC 8-100 of a sequence not defined in the specification, for amplifying a CC target sequence contained within a Streptococcus nucleic acid sequence, where the first primer is substantially complementary to the target sequence and the second primer is substantially complementary to the complement of the target sequence, and where the parts of the primers CC where the protein, and determining whether the test compound binds to the ground substantial complementarity define the test compound binds to the protein and a Streptococcus pneumoniae bacterium, where one or more CC genes encoding the proteins has been rendered inactive. The proteins, CC nucleic acid molecules, antibody and compositions are useful as CC medicaments for treating or preventing a disease or infection due to streptococcus bacteria, particularly S. pneumoniae, such as gneumonia, cspais, otitis media or ear infection. They are also useful in developing CC vaccines, otitis media or ear infection. The present sequence is one of CC the 2489 identified coding region from the genomic sequence.

New vaccine compositions are described which comprise a Streptococcus pneumoniae polypeptide (or fragments) of 80 - 680 amino acids in length that comprise at least one histidine triad residue (HxxHxH) or a coiled-coil region, or an antibody directed against these features. The vaccine is useful in protecting against infection by Streptococcus pneumoniae. The vaccine composition comprising Pneumococcal infections which includes otilis media, nasopharyngeal and bronchial infections.

CC The present invention describes a computer readable medium which has CC the nucleotide sequences SEQ ID NO:1 to 391 (AAV52134 to AAV52524) CC recorded on it, or a representative fragment or a sequence at least 95% CC identical to SEQ ID NO: 1 to 391. The nucleotide sequences depicted in CC SEQ ID NO: 1 to 391 (AAV52134 to AAV52524) are genomic fragments from CC Streptococcus pneumoniae. The present invention also describes an CC isolated nucleic acid molecule encoding a homologue of any of the CC fragments of the S.pneumoniae genome (SEQ ID NO:1 to 391) where the CC nucleic acid molecule is produced by a process comprising: (a) screening CC a genomic DNA library using as a probe a target sequence defined by any CC of the sequences in SEQ ID NO:1 to 391, identifying members of the CI library which contain sequences that hybridise to the target sequence is not isolating the nucleic acid molecules from the members; or (b) isolating CC mRNA, DNA or cDNA produced from an organism, amplifying nucleic acid molecules whose nucleotide sequence is homologous to amplification
                                   primers derived from the fragment of the S. pneumoniae genome to prime the amplification and isolating the amplified sequences. The computer readable medium can be used in a computer-based system for identifying fragments of the S. pneumoniae genome of commercial importance, or expression modulating fragments of the S. pneumoniae genome. Products from the present invention can be used in diagnosis kits and assays, and pharmaceutical compositions and vaccines for S. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Computer-readable medium with recorded Streptococcus pneumoniae polynucleotide sequences - useful in diagnostic kits and assays pharmaceutical compositions and vaccines for Streptococcus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 1; Page

                                                                                                                                     á
                                                                                                                                                                                                                                                                target sequence not defined in the specification, for amplifying a target sequence contained within a Streptococcus nucleic acid sequence, where the first primer is substantially complementary to the target sequence and the second primer is substantially complementary to the complement of the target sequence, and where the parts of the primers complement of the target sequence, and where the parts of the primers having substantial complementarity define the termini of the target sequence to be amplified, assay comprising contacting a test compound with the protein, and determining whether the test compound binds to the protein and a Streptococcus pneumoniae bacterium, where one or more genes encoding the proteins has been rendered inactive. The proteins, nucleic acid molecules, antibody and compositions are useful as medicaments for treating or preventing a disease or infection due to streptococcus bacteria, particularly S. pneumoniae, such as pneumonia, sepsis, otitis media or ear infection. They are also useful in developing vaccines, diagnostics and antibotics. The methods are useful for identifying immunodominant proteins. The methods are useful for Streptococcus pneumoniae type 4 strain genome sequence is the printed specification but was obtained in alcotronic.
                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a protein comprising or having at least 50% identity to any of the 2469 amino acid sequences, identified in the specification (available on a computer readable format), or its fragment, expressed from 2469 of 2489 identified DNA coding regions from the Streptococcus pneumoniae type 4 strain genomic sequence appearing as Streptococcus pneumoniae type 4 strain genomic sequence appearing as Sh856454. Also included are an antibody with binds one of the proteins, treating a patient by administering the protein, DNA or antibody (in a composition), a kit comprising first and second primers, which are the nucleic acid cited above or fragments between nucleotides and second primers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New

                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes nucleic acids (I) encoding protein antigens (II) from Streptcoccus pneumoniae. The protein antigens have bactericidal activity. The nucleic acids, encoding the protein antigens, may be used for the recombinant production of the proteins they encode. The protein antigens may then be used as vaccines for the prevention and treatment of Streptcoccal infections in mammals (especially humans) which result in, e.g. meningitis, otitis media, bacteraemia and/or pneumonia. The present sequence encodes the S. pneumoniae BVH-11 protein antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Streptococcus pneumoniae; BVH-3; BVH-11; BVH-28; antigen; vaccine; prophylaxis; therapy; infection; diagnosis; meningitis; bacteraemia; otitis media; pneumonia; immunisation; bactericidal; ds.

                                                 The invention describes an isolated polypeptide (I) with 70-90% CC identity to Streptococcus pneumonia protein BVH-3, BVH-11, variants of CC BVH-3 or BVH-11, or chimeric sequences derived from them. A vaccine (II) CC comprising (I) is useful for therapeutic or prophylactic treatment of CC individual susceptible to these disorders. (II) is also useful for therapeutic or prophylactic or prophylactic treatment of any streptococcal bacterial CC infection (e.g., caused by Streptococcus pneumonia infection in an CC infection (e.g., caused by Streptococcus pneumoniae, group A CC Streptococcus such as Streptococcus pneumoniae, group A Streptococcus sureus) in an individual susceptible to the infection. CC as Streptococcus aureus) in an individual susceptible to the infection. CC techniques. The Streptococcus polypeptides are useful in a diagnostic CC test for S. pneumoniae infection. (III) is useful for designing DNA CC probes for use in detecting the presence of Streptococcus in a biological sample suspected of containing the bacteria. The DNA probes may also be cused for detecting circulating S. pneumonia nucleic acid in a sample for CC diagnosing streptococcal infections. This sequence encodes the Streptococcus pneumoniae protein BVH-11, used to create the antigenic CC peptides described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New Streptococcus pneumoniae BVH-3 and BVH-11 variant and epitope-bearing polypeptides, useful as vaccine components or preventing streptococcal infections such as otitis media
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Hamel J,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Вþ
                                                                     The DNA sequences can be used for producing an immune response to Streptococcus pneumoniae in a mammal. Antibodies against the proteins can be used to inhibit S. pneumoniae-mediated C3 degradation.

3-mediated inflammation and rejection in xenotransplantation can be inhibited by expressing the nucleic acid sequences on the surface of a organ of an animal. In particular, the polypeptides are useful for stimulating the immune system and are effective to immunize or treat a mammalian subject against Streptococcus pneumoniae infection or
                                                                                                                                                                                                                                                                                   The present sequence, isolated from Streptococcus pneumoniae, envinuman C3-degrading protein (see Ay91939) of about 92 kDa. This sequence may encompass a smaller Ay91939) of both coding sequencemay encompass a smaller 20 kDa polypeptide coding sequence may encompass a Smaller Ay91939 and coding sequencemay encompass a smaller and control of the coding sequencemay encompass a smaller and coding sequencemay encompass a smaller and coding sequencemay encompass as the coding sequencemay encompass.

AAY81501 to AAY81679 represent specifically claimed protein sequences isolated from Streptococcus pneumoniae. AAA05407 to AAA05590 represent specifically claimed nucleotide sequences isolated from S. pneumoniae. The sequences have antibacterial and antiinflammatory properties. The protein sequences, and fragments of them, are useful as immunogens and/or antigens. The nucleotide sequences can be used in vaccines and in diagnostic assays. The proteins and nucleotides can be useful for the detection and diagnosis of S. pneumoniae. The protein sequences are also useful for screening an agent capable of antagonising, inhibiting or interfering with the function or expression of the proteins in which the agent is useful for treatment or prophylaxis of S. pneumoniae infection

 The invention relates to a protein comprising or having at least 50% identity to any of the 2469 amino acid sequences, identified in the specification (available on a computer readable format), or its fragment, expressed from 2469 of 2489 identified DNA coding regions from the Streptococcus pneumoniae type 4 strain genomic sequence appearing as ABS56454. Also included are an antibody which binds one of the
                                                                                     Claim
                                                                                                                               New proteins and nucleic acid molecules from Streptococcus pneumoniae, useful as medicaments for treating or preventing a disease or infection

CC proteins, treating a patient by administering the protein, DNA or Cantibody (in a composition), a kit comprising first and second primers, CC which are the nucleic acid cited above or fragments between nucleotides CC 8-100 of a sequence not defined in the specification, for amplifying a CC target sequence ont defined in the specification, for amplifying a CC target sequence contained within a Streptococcus nucleic acid sequence, CC the first primer is substantially complementary to the target sequence and the second primer is substantially complementary to the target complement of the target sequence, and where the parts of the primers CC having substantial complementarity define the termini of the target sequence to be amplified, assay comprising contacting a test compound CC with the protein, and determining whether the test compound to the protein and a Streptococcus pneumoniae bacterium, where one or more CC genes encoding the proteins has been rendered inactive. The proteins, cutleic acid molecules, antibody and compositions are useful as CC medicaments for treating or preventing a disease or infection due to Streptococcus bacteria, particularly S. pneumoniae, such as pneumonia, compositions are useful for CC streptococcus bacteria, particularly S. pneumoniae, such as pneumonia, compositions, otitis media or ear infection. They are also useful in developing vaccines, diagnostics and antibiotics. The methods are useful for CC the 2489 identified coding region from the genomic sequence is one of the printed specification, but was obtained in electronic formation in the sequence.

CC format directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences. \_developing the
